

AI visibility report

Can AI assistants find, recommend and help people book A MANO?

The short answer

A MANO is already visible in AI recommendations. The main problem is that people are rarely given a direct way to book, and some public facts are not clear or consistent enough.

A MANO WAS SHOWN

79 of 96

A MANO appeared in most answers.

AMONG THE FIRST 3 CHOICES

63 of 96

A MANO was often a leading recommendation.

A DIRECT BOOKING OPTION APPEARED

5 of 96

This is the clearest weakness.

1 What we did

Chose 12 questions

Six customer needs in English and German.

Attempted four AI products

ChatGPT, Google AI Mode, Perplexity and Copilot.

Repeated the test three times

The same frozen questions were used in three rounds.

Saved the proof

Answers, access blocks, sources, screenshots, facts and booking links.

Baseline complete: 96 usable answers and 48 access-blocked slots. Copilot accounted for 36 blocks; Perplexity accounted for 12 Round 3 blocks. All 144 of 144 planned checks are finalized, and blocked access is excluded from recommendation rates.

2 What we found

Visibility is good; booking and consistency need work.

Strongest area

A MANO performed best for dinner searches near Strausberger Platz.

Biggest weakness

Only 5 of 96 answers offered a direct A MANO booking route.

Weaker areas

German, Alexanderplatz, handmade pasta and private-event searches were less consistent.

Trust gap

Only 23 of 96 answers showed a source clearly about A MANO. Some facts still need owner confirmation.

WHAT THE CUSTOMER ASKED	SHOWN	FIRST 3	BOOKING	PLAIN RESULT
A general Italian dinner in Berlin	16/16	15/16	0/16	Strong visibility. Booking is missing.
Dinner near Strausberger Platz	16/16	15/16	5/16	Strongest result. Booking appeared, but not consistently.
Dinner near Alexanderplatz	11/16	9/16	0/16	Mixed visibility, especially in German.
Handmade pasta	12/16	8/16	0/16	Mixed visibility. Only 1 answer showed a clear source about A MANO.
Business lunch	13/16	9/16	0/16	Often shown, but no booking route appeared.
Private celebration or company event	11/16	7/16	0/16	Mixed visibility. Event details still need confirmation.

What happens next

Confirm the facts, repair the customer journey and test the same questions again.

3 What is needed

Use the completed baseline The 144-slot pre-change measurement is frozen for the later like-for-like comparison.	Approve facts and booking The owner confirms the exact facts below and chooses one official A MANO reservation destination.
Official business details Confirm the official name, address, phone number, website and how the location should be described.	Hours, prices and payment Confirm service hours, kitchen closing time, exceptions, price range and accepted payment methods.
Restaurant features Confirm outdoor seating, accessibility, takeaway, parking, handmade pasta and private-event options.	How customers book Choose one official booking link, explain how confirmation works and provide a phone fallback.

Why this matters: AI answers currently mix correct information with unconfirmed claims about prices, hours, accessibility, pasta, private events and other details. One approved fact sheet prevents new contradictions.

4 What we can do to make it better

1 Confirm the correct facts The owner confirms the official name, hours, prices, services, event facts and one booking route. 2 Choose one official booking route Use one A MANO-specific destination across the website and important profiles. 3 Fix the biggest blockers Repair the broken booking and menu links, then correct unclear business information. 4 Update the website and public profiles Make the website, maps and major profiles show the same clear facts in German and English. 5 Measure and test again Track reservation clicks where possible, then repeat the same questions and compare with this baseline.	What should improve • The same A MANO name and business details everywhere. • A direct booking route people can use from an AI answer. • Stronger German visibility. • Clear proof for pasta, business lunch and events. • The same facts on the website, maps and directory profiles. • A clear before-and-after comparison.
---	--

Important limitation: AI answers change over time. These results are the completed starting point before improvements; they do not guarantee the same answer every time or prove booking growth, revenue impact or causal change. No website or public-profile changes have been applied yet. The dashboard contains the exact questions, platform results and complete evidence.
